Studen Management System

By Fuzzy Logic

A certain eduction instution has contacted Fuzzy Logic and has requested from them to design and develop an operational database system which allows the institution and student body to manage student registrations.

The system should be required to perform the following utilities:

C

- Allow a new student to register
- Allow instutional administrators to make use of the system
- The administrator should be able to add additional administration staff

R

- Students should be able to view their own registration
- Administration staff should be able to view their details

U

- Store a students registration in a private database
- Allow a student to edit their registration and personal details
- Store all administrators in a private database
- Provide the administrator the option to change their personal details
- Allow administrators to populate a database of results which was achieved by the student

D
- Administrators should have the authority to delete???

The System will be implemented using a private sql database. The details of which are …

To ensure that the System is operational
